# LIFEOMIC

Patient Mobile App for Clinical Care and Research

LifeOmic's proven **Patient Mobile App,** downloaded over 5 million times, integrates and automates engagement pathways to keep your patients or subjects on track to improve understanding and efficacy while providing visibility into behaviors outside of the healthcare setting.

All-in-one Design

Don't get rid of what's working now. LifeOmic can work with your developers for native customizations and co-create to integrate for success.

Customized to Your Unique Needs

The app can be white labeled with your branding and the modular design enables it to be configured to meet your unique needs.

AI Communication Tools

The LifeOmic Patient Mobile App has built in chatbot capabilities to field commonly asked questions without the need of healthcare staff to intervene unless escalated.

Two-Way Data Collection

Collect eConsent, track medication adherence, monitor symptoms and more with the ability to quickly and easily create your own custom programs.

Robust Analytics & Tracking

The app integrates with the LifeOmic Platform in the full spectrum of critical data sets including EMR, wearables, biometric, surveys, genomic sequencing and biomarkers. Glean research insights or configure custom alerts for proactive intervention.

LifeOmic is a healthcare technology company that works with health care providers, researchers, and health-focused enterprises to aggregate and utilize health data to improve patient outcomes and provide valuable, actionable insights.
